SALMET - All in One „Aviary system for layers“

SALMET - All in One

Aviary system for layers

SALMET®

... for your success!

The completely galvanized system offers maximal hygiene (lower susceptibility to infestation with red fowl mite) guaranteeing that way greater bird wellbeing and consequently highest laying performance

- All the nests are located on one level which ensures the even distribution of the eggs
- A variety of different widths and heights of the system allows optimum use of the house
- Barring grids facilitate to keep birds out of the area below the equipment
- Wide service aisles as hens are moving inside the system, up and down
- The control of the birds is comfortable due to low installation height and walk-in balconies
- Nest control at eye level
- Simplified cleaning below the manure belts due to small width of the installation (2 m)
- Stock density: up to 18 birds per m² house floor space
- Optionally plastic or metal slats

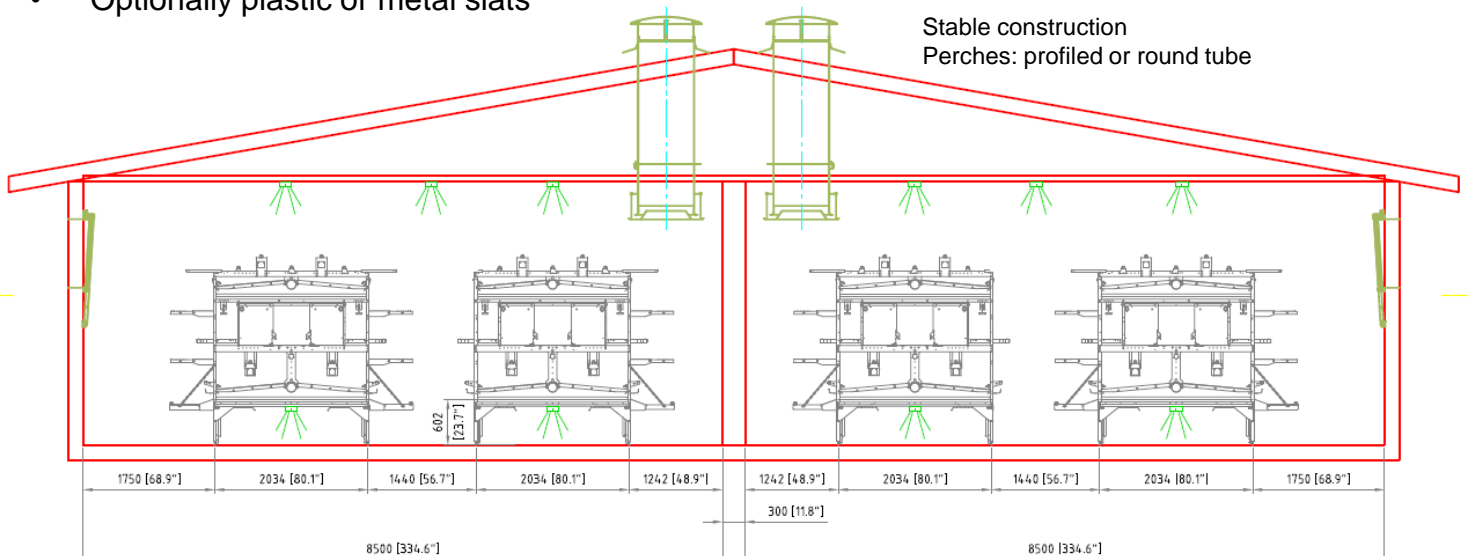

Easy access to nests, feed and water due to short, animal-friendly distances

End-to-end, walk-in approach balconies in front of the nests facilitate easy removal of the birds from the upper tiers
Safe collection of eggs laid on slats from the egg collecting channel. No egg pecking

Stable construction
Perches: profiled or round tube
